OR BOTH FEET IT CAN BE AN UNFORTABLE AND CHALLENGING PROBLEM FOR THE
PATIENT LEADING TO INSTABILITY AND PAIN WHEN WALKING OR EVEN STANDING'
Pes Cavus is also known as Pes Cavus. It is a genetic defect resulting in a high foot arch. Pes Cavus feet are relatively inflexible, which increases the chances of sustaining certain sports injuries. This will often be associated with very tight calf muscles at the back of the lower leg. Pes Cavus of the foot can cause pain in the feet during running.

The cavus foot is a deformity characterized by an elevated medial longitudinal arch and a high arch. Pes Cavus is a condition in which the foot has a very high arch. Because of this high arch, an excessive amount of weight is placed on the ball and heel of the foot. When walking or standing, Cavus foot can lead to a variety of signs and symptoms, such as pain and instability. It can develop at any age and can occur in one or both feet.

Pes cavus is a foot with an abnormally high plantar longitudinal arch. People who have this condition will place too much weight and stress on the ball and heel of the foot while standing and or walking.
The spectrum of associated deformities observed with pes cavus includes clawing of the toes posterior hind foot deformity described as an 'the cavus foot an issue of foot and ankle clinics of april 26th, 2020 - the cavus foot an issue of foot and ankle clinics of north america 10 off hardback the cavus foot an issue of foot and ankle clinics of north america author by alexej barg md be the first to review this product isbn 9780323682084 publication date 28 06 2019''Cavus Foot Causes Symptoms And Treatment Options UFAI
